

Campus Master Plan Progress Update February 21-22, 2024

The campus planning team from Page is currently in phase 3 of a five-phase process. To date, Page has completed existing condition analysis, preliminary assessments, space verification, and preliminary needs identification for the DeLand and Gulfport campuses. The team has participated in ten focus group discussions and multiple one-on-one listening sessions with key leadership, which have directly informed the planning themes and initial concepts that the campus master plan is organized around defined below.

In early February, the Steering Committee and Working Group convened to preview the preliminary space needs outcomes, planning themes, and initial concepts for the DeLand and Gulfport campuses. The feedback and key takeaways from those discussions will inform the team's next steps as they finalize the space needs outcomes, refine the planning concepts, and develop the draft plan.

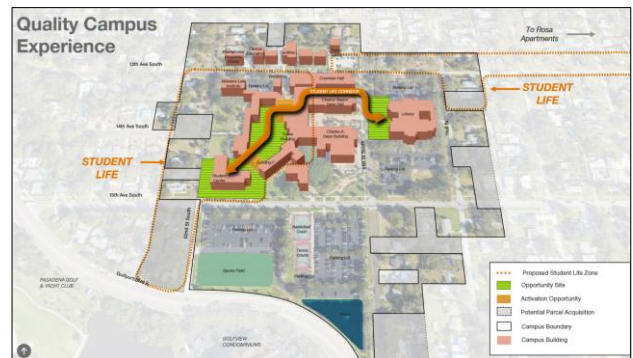

Space and Facility Optimization

- Promote department distribution and space efficiencies that foster learning and collaboration.
- Prioritize key facilities for investments and strategic repurposing to improve function and effectiveness.

Quality Campus Experience

- Reinforce the campus core.
- Enhance and connect pedestrian networks to be more consistent and safer.
- Increase student space on campus that supports academic and social gathering.

Celebrate Stetson's Esteemed Identity

- Create notable campus gateways and edge conditions to promote the campus presence.
- Celebrate and advertise Stetson's accomplishments and events.
- Promote Stetson's off-campus buildings and enhance connectivity to the DeLand campus.

Environmental Resilience and Sustainability

- Manage the natural and built resources at each campus to model resilient and sustainable practices.
