

## Setting Up Virtual Lab (Apple)

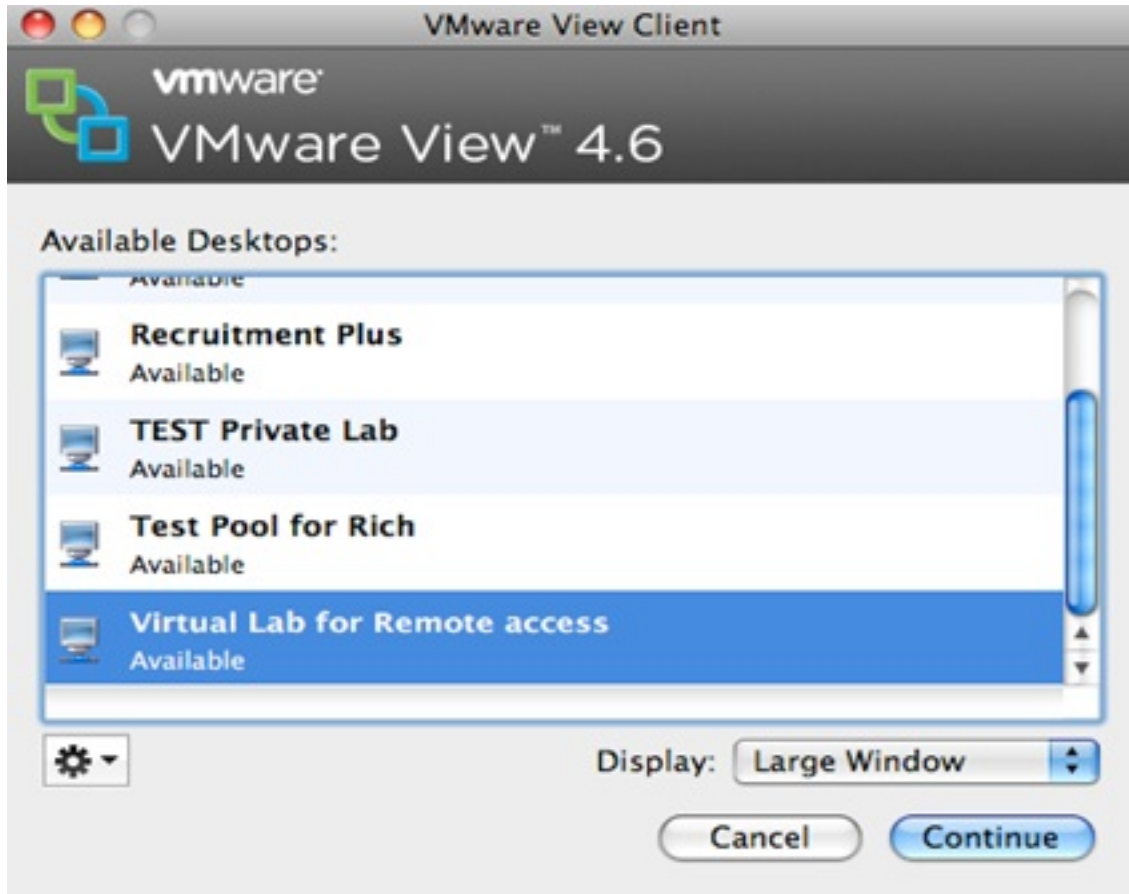

1. Using any web browser, go to <http://vlab.stetson.edu>. Your system will be checked and the correct client will be offered. Click on **View Client (6 MB)**
2. Once downloaded click on **VMware View client** in the Downloads folder.
3. Click to **agree** to the software license agreement.
4. Drag the VMware View Client to the Applications folder to install the software.
5. From your Applications folder, open the software.
6. In the Address field, type: **vlab.stetson.edu**

7. You'll be prompted to enter your Stetson username and password. Click the checkbox next to "Remember this password in my keychain" if you don't want to be prompted to enter your credentials again.

8. Choose "Virtual Lab for Remote Access."

9. You now have a Microsoft Windows 7 instance that acts exactly like you were in one of our labs.

Warning: Just like in the lab, anything saved to the desktop or PC is lost when you exit. Always save to your network drive. This should be automatically mapped in the virtual machine.

If you have questions or problems, contact the help desk at 386-822-7217 or by email at [helpdesk@stetson.edu](mailto:helpdesk@stetson.edu).
