MAP-Works® Empowers Campus Professionals To:

- Quickly identify and reach out to at-risk students early in the term to have the greatest impact on retention and student success
- Coordinate efforts with other faculty/staff who have a direct-connect relationship with their students through alerts and notes
- Prepare for student meetings in advance, so they can spend time helping students rather than diagnosing problems
- Quantify efforts and outcomes
- Benchmark against other institutions

MAP-Works® Empowers Students To:

- Gain insights about themselves through social-norming
- Recognize gaps between their behavior and their desired outcomes
- Understand the elements which impact their social and academic success
- Reach out and capitalize on campus resources which can help them address their problems

MAP-Works® is the most comprehensive student success and retention platform. Grounded in student development theory, MAP-Works® uses tested and proven algorithms to identify at-risk students. This campus-wide solution is visual and easy to navigate for both students and campus professionals and the custom student reports, notes and alerts engage and motivate users to utilize the system. EBI offers excellent training and support, as well as on-campus consulting and training to aid you campus in implementation of MAP-Works®.

Invest your time, energy and resources in programs with proven impact.

MAP-Works®, Making Achievement Possible, is EBI’s comprehensive student retention and success solution. It efficiently and effectively provides faculty and staff the information they need to identify and coordinate intervention with at-risk students. MAP-Works® empowers faculty and staff to positively impact student success and retention and also educates students about behaviors critical to long-term success.

MAP-Works® Retention Process:

- **Identify** - Retention is driven by systematic, early and comprehensive identification of student issues. MAP-Works® utilizes a 22 year old heuristic algorithm to identify students at risk. MAP-Works® incorporates prominent student development and learning theories and integrates both profile and student experience data to ensure accurate identification of at-risk students.
- **Inform** - Through the MAP-Works® interface, student assessment results are instantly available to faculty and staff to identify their at-risk students. They are provided with the right information to focus on the critical issues for each individual student.
- **Motivate** - MAP-Works® provides the motivation that faculty and staff need to effectively invest their limited time and resources into helping the right students. Information is easily extracted from dashboards and talking points. More effective student meetings will take place because faculty and staff will understand real student issues.
- **Coordinate** - MAP-Works® allows for easy communication among the faculty and staff who share a role in helping specific students and student populations.
- **Intervene** - Interventions will occur with more control and direction based on the data MAP-Works® provides.
- **Manage** - MAP-Works® provides a robust management tool that measures impact, ensures accountability and ultimately measures improvements in student success and retention.
